SINCE 1967

BD MOBEL[®]

This is why our furniture is fresh and durable.

Why wooden frame?

The frame of the leather furniture is as important a factor when measuring the life of the furniture as the leather itself. The wooden frame guarantees the durability and flexibility of the furniture. That's why DAHLQVIST can give the frame a ten-year warranty.

What affects seating comfort?

The DAHLQVIST furniture is built down to the smallest detail in such a way that it provides the greatest possible seating comfort. Thanks to the properly balanced load-bearing capacity of the suspension and cushions, both the back and the seat receive natural and pleasant support.

Why different seat heights?

Seat height is often decisive in terms of comfort. For the leather furniture to be comfortable to sit on, it is important to be able to adjust the seat height according to the person's weight and height.

Why do we use these materials?

So that the furniture stays fresh and lasts longer. When you choose DAHLQVIST furniture, you also choose a fine product that meets the highest quality standards.

We give the frame a ten-year warranty.

Everything under the surface of the DAHLQVIST furniture is of equally high-quality. To prove this, we give the frame a ten-year guarantee and this is valuable security.

WE GIVE
**A 10-YEAR
WARRANTY**
FOR THE WOODEN

**DAHLQVIST
LEATHER FURNITURE
EXPERT**

Choosing DAHLQVIST furniture gives you a lot of possibilities, because the furniture is made only after you have chosen the model and colour. The furniture is therefore made especially for you. You can choose the colour of the leather from our large leather selection. The leather has been tested according to international requirements. We especially pay attention to the quality of the frame and cushions. Although they are not visible to the eye, they mean a lot over time. That's why we use wooden frames and the best quality upholsteries for our leather furniture.

Dahlqvist uses only the best leather qualities.

Every hide is checked.

The pieces of leather used in DAHLQVIST furniture have been carefully selected. Sorting makes it possible to accurately select the most suitable pieces for each piece of furniture. Softer leather for the neck cushions and firmer leather for the back and seat cushions. The cutting also enables us to create furniture in which the texture and appearance of the leather give the furniture the right harmony and balance.

We don't skimp on leather.

We use a lot of leather when making our furniture. DAHLQVIST leather furniture is spacious, soft and comfortable, they do not feel tight and leave no (do not give an) impression of something hard and rigid. You notice this immediately seeing the DAHLQVIST furniture. And especially when sitting on it.

Imagine the feeling

This is how you create the feeling of genuine leather.

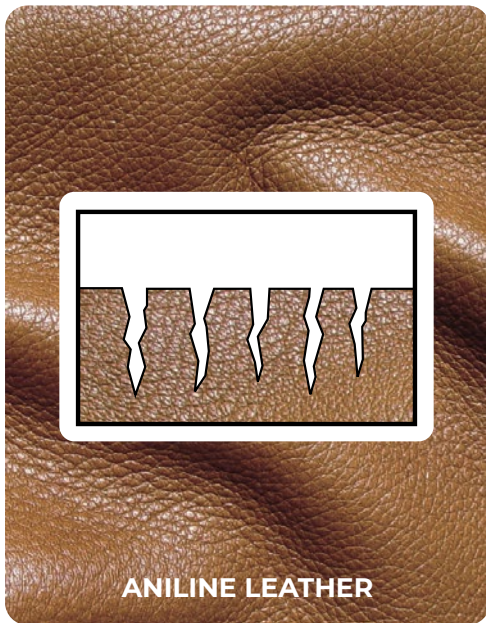

Good quality leather gives the furniture a genuine leather feel. Good leather breathes. It adapts to body temperature in a natural way and never feels cold or damp. Good leather is soft to the touch and beautiful to look at. It is durable. Finishing consists of several steps in which the leather is given its final appearance and the required durability properties. Genuine leather is a natural product, where there are differences in colour shades between different hides and different parts of the hide.

A natural product.

Look at the picture on the right! The leather shows insect bite marks and scars that make the leather look natural and alive. So why not use what nature offers! Scars on the skin are not unusual at all. Scars do not reduce the quality and durability but give an individual appearance.

What exactly is genuine leather?

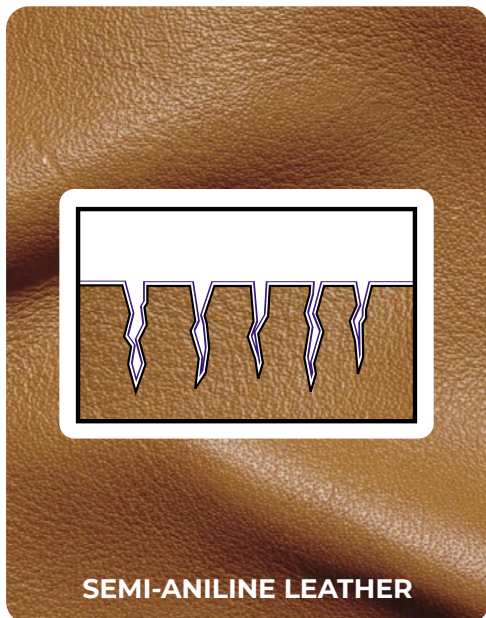

ANILINE LEATHER

It is often difficult for the consumer to know what genuine leather actually is. Saying that the piece of furniture is upholstered in “genuine leather” is not enough. The difference between different furniture leathers is at least as great as the difference between good and bad fabric. Good furniture leather is soft, breathable, dyed through, genuine, full-surface leather.

That's why we want to talk about DAHLQVIST leather and its properties. The leather manufacturer must classify the raw material into several different quality groups, depending on what the final product is supposed to represent. DAHLQVIST uses four leather types as follows:

ANILINE LEATHER.

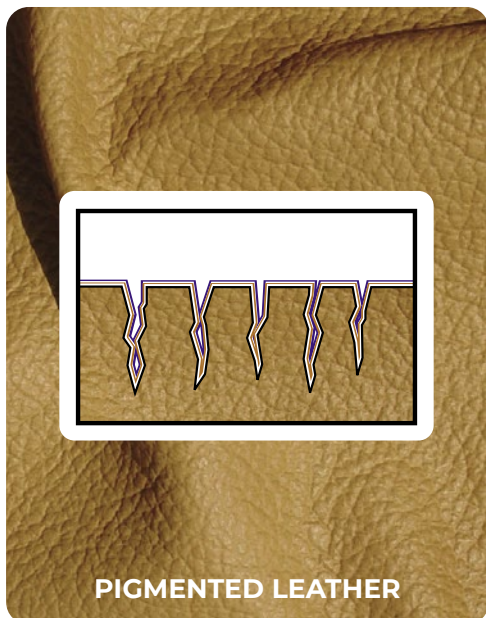

Wild aniline leather is the most genuine soluble dyed through, smooth, soft and in every respect as natural as possible. Its feel and appearance give it an individual character. Wild aniline leather does not have any finishing layers and thus it can include some natural irregularities such as folds, veins, healed scars, insect bites, etc.

SEMI-ANILINE LEATHER

SEMI-ANILINE LEATHER.

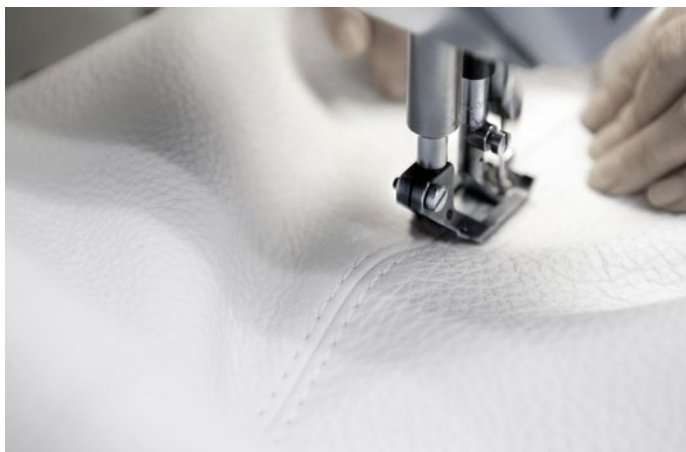

Semi-aniline leather is similar to aniline leather, it but differs from it as it is coated with a protective lacquer layer – thanks to this, the leather is more carefree in use.

PIGMENTED LEATHER

PIGMENTED LEATHER.

In addition to dyed through, pigmented layers of different strengths have been sprayed onto the leather surface. As a rule of thumb, the fewer pigmented layers, the better the leather retains its natural properties and softness. Sometimes, its surface can also be embossed to resemble genuine leather patterns.

Choose the leather that nature offers!

In addition to the four leather types used by DAHLQVIST, there are a number of other different quality painted and brushed leathers. What has actually happened to these leathers? For example, brushed leather means that the natural surface of the leather has been sanded away, after which the leather is treated with strong cover substances. However, with these measures, the natural and basic properties of the leather are lost. At DAHLQVIST, we do not use brushed and painted leather. Therefore, choose the leather that nature can provide! A scar is not unusual. DAHLQVIST guarantees that the leather will not deteriorate. After studying this brochure, you can decide if you want a piece of furniture with the features offered by DAHLQVIST. Ask our qualified sales-people for additional information.

Structure of the suspension

The most important, though invisible details of the furniture are the cushions and suspensions of the seat and back.

The high-quality and finished frame structures and suspensions of DAHLQVIST furniture enable the use of sturdy and firm cushions.

The long no-sag steel spring in the seat makes lumbar support effective. The furniture will be pleasant and durable. When designing DAHLQVIST furniture, the starting point is always seat comfort. For each of us, young and old, comfort is the most important feature required from a good piece of furniture.

An example of a seat structure:

-  Leather; surface material
-  Polyester wadding; surface structure, ventilation
-  Polyurethane; makes the surface soft and flexible
-  Polyurethane; more stable, high progressive load capacity
-  Fabric; connective tissue to protect and bind materials
-  Polyurethane: effective load-bearing capacity
-  Tricot-type, elastic fabric with high tear resistance
-  No-sag steel springs; 3.8 mm hardened steel wire (no-zag), 5-11 springs connected in parallel per seat.

Please sit down!

Take your time when choosing your leather furniture.
Try the leather, squeeze, press, test, ask and compare.
Remember that you can live with leather furniture for many,
many years. The better the quality, the longer you
can enjoy the furniture.

If your choice applies DAHLQVIST furniture,
thank you for your trust!

Pleasant sitting moments for you.

Bound to tradition, quality and handcraft, we strive for progress, following the newest Scandinavian design trends. Please visit our website www.bdmobel.com to get more information.
